

Exceptional Composites for Walls and Floors

Building in Engineered Stone has been redefined. Our selections of new technology-driven materials are combined in unique ways in order to accentuate any living space irrespective of size, colour or style.

By remaining true to time-proven techniques, StoneBuild have built on these solid building methods by incorporating and adapting new and improved composite materials that are durable, dependable and elegant in touch and appearance.

We can engineer different styles of cast items for use on walls and floors, around doors and cornices, both inside and out.

Our wall cladding and tiles, floor tiles and pavers and architectural elements such as quoins, architraves and corbels are highly detailed and represent the cutting edge of casting in composite materials.

We incorporate resins, epoxies and polymers to provide strong and durable finishes that feel and look as intended. Product selection by Building Designers, Architects, Builders and Renovators alike is now made easier with a product that is consistent, uniform and uncompromising on quality.
